Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence in P20121 is the consensus sequence of a hormonallly active polypeptide. The sequences in P20403-6 are specific examples these polypeptides. These polypeptides are water soluble and are analogues of lutenizing hormone/releasing hormone (LH-RH). These peptides are used within the scope of the invention in hormonally active microcapsule formulations comprising at least one of these polypeptides and optionally a polymer hydrolysis modifying agent intimately mixed with or coated by a biocompatable, biodegradable polymer which when administered to a mammal, will release a daily amount of polypeptide effective for maintaining an hormonally related condition over a predetermined period of time. The specific hormonally related condition is the control of fertility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;

Prefd. peptides are described in US4234571 and are useful for fertility control, growth enhancement, treatment of prostatic cancer, inducing abortion. The compsn. comprises 0.005-5 mg/ml of the peptide, with 0.2-5% w/v of the surfactant, together with the buffer soln. A typical compsn. contains 0.05-4 mg/ml of a peptide and 0.5-4% sodium glycocholate. The molar ratio of bile acid to peptide is equal to or greater than 20:1. An additional surfactant may be
                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence of luteinising hormone releasing having D-3 pyridyl-alanine at position 6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            P71316

                                                                                                                                                                                The analogue is an agonist. It inhibits the cytotoxic effects of cancer therapy on bone marrow cells, and protects the cells from the undesirable effects of radio- and chemotherapy used to treat hormone-dependent and -independent cancers. The compsns. may be in sustained release form and may be given parenterally, esp. i.m.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           These peptides are synthetic analogues of LHRH which are termed super agonists because of their superior potency. They may be used to treat prostate cancer. The peptides are synthesised by solid phase techniques using benzhydrylamine resin as solid support.

It, and its salts, is useful as an agonist for promoting fertility e.g. for treating amenorrhoea, luteal insufficiency, oligosperma and retarded puberty. It is also useful as a contraceptive and for treating steroid-dependent cancers. As an antagonist it is useful for treating gonadotropin—and steroid-dependent diseases.

The N-terminal has an H gp. or a 1-7C acyl attached. Residues 1, 2 and 3 are opt. ring substd. by one or two of Br. Cl. F. NO2, NH2, Me or OME. Residues 6 and 7 opt. have a partially protected glycosyl attached which increases their water-solubility without impairing their activity.
The peptide is one of several examples of compounds derived from the sequence of LHRH in which the nitrogen atom of at least one of the amide bonds has been alkylated. The peptides are used to modulate levels of sex hormones in males and females. They are stable against proteolytic enzymes and biologically potent after oral admin
                                                                                                                                                                                                                10-JUL-1990;

            The C-terminal residue (Gly-CO-NH2) can be replaced by ethylamide. This peptide and fragments of it (i.e. amino acids 4-10, 5-10, 6-10 and 7-10) are agonists and antagonists of LHRH. They are useful for treating e.g. precocious or delayed puberty, psychiatric disorders esp. those of the libido or sexual aggression, etc. In addition they are useful for functional exploration of the hypothalamus-hypophyseal axis and for radioimmunological or biological assay (of LH, FSH and steroid levels) in biological fluids and biopsy samples.

                                          The C-terminal residue (Gly-CO-NH2) can be replaced by ethylamide. This peptide and fragments of it (i.e. amino acids 4-10, 5-10, 6-10 and 7-10) may be agonists or antagonists of LHRH. They are useful for treating e.g. precocious or delayed puberty, psychiatric disorders esp. those of the libido or sexual aggression, etc. In addition they are useful for functional exploration of the hypothalamus-hypophyseal axis and for radiommunological or biological assay (of LH, FSH and steroid levels) in biological fluids and biopsy samples.
                                                                                                                                                                                                                                                                                                                               New peptide homologous with luteinising hormone-releasing hormone used to treat gynaecological conditions, cancer of gonads and sec. sexual organs, psychiatric conditions and in assays

                                                                                                                                                                                        DXXXX
                                                                                             B
                                                                                                                                                                                                         A gonadotropin releasing hormone conjugate has been developed which has the formula: 2-[L1-Am-(Y1(L2-X)-An)-9-Y2(L2-X)-Ap.OH]r, where A = an amino acid selected from Gly, Ser, Thr, beta-Ala, and Ala, with the proviso that at least one A is Ser or Thr; L1 = a linker optionally attached to an internal marker; L2 = a linker; X = a gonadotrophin creleasing hormone (GnRH) having a free sulphydryl group; Y1, Y2 = Lys or ornithine (Orn); Z = an immunogenic carrier protein; m = 0-3; n = 5 cor ornithine (Orn); Z = an immunogenic carrier protein; m = 0-3; n = 5 cor ornithine (orn); z = an immunogenic carrier useful as vaccines for use in immunosterilising animals, fertility control, and for treatment of steroid hormone stimulated tumour or conditions such as endometriosis. The conjugates employ a hydrophilic linear scaffold as a means to increase loading of desirable hapten onto a carrier protein. Compared to conventional GnHH conjugates, these provide more GnRH per carrier molecule while utilising a minimal number of carrier molecule attachment sites. The present sequence represents [(3-Mercaptopropanoyl) of the novel vaccine compositions provide a high titre of anti-GnRH cantibody and produce minimal injection site lesions.
                                                                                                                                                                                                                                                                                                                                                                                                                                  New gonadotropin releasing hormone conjugates - used a immuno-sterilisation of animals, fertility control or steroid hormone stimulated tumours or conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modified-site

The present sequence represents a GnRH analogue, preparation 4, used in the preparation of GnRH. Vaccines containing this immunogen are used to control fertility; reduce undesirable behaviour (e.g. aggression) induced by reproductive hormones and to treat (a) tumours that respond to steroid sex hormones (e.g. breast and prostatic cancers) or (b) endometriosis. Particularly the immunogen is used to sterilise animals, e.g. to improve feed efficiency and carcass quality, and to eliminate boar taint. PB is an effective immunogenic carrier for GnRH, providing high titres of Ab.
                                                                                                                                                                                                                        Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           by LHRH, e.g. malignant breast cells, malignant prostate cells, malignant ovarian cells, malignant oncofoetal cells or hyperplastic cells. They can also be used for down regulating the libido of an animal. They can also be used for inhibiting pregnancy, prostate enlargement, endometriosis or inflammatory responses. The LHRH compositions induce a more effective immune response against LHRH carrier-adjuvant compositions. The effective immune response against LHRH results in prevention of the release of the hormones LH and FSH from the anterior pituitary. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immune response to LHRH, for castrating an animal, for regulating oestrus cycling in a female animal or for inhibiting characteristics induced by the sexual maturation of an animal, e.g. aggression or sexual activity. They can also be used for achieving production gains in livestock, e.g. reduction or elimination of unwanted organoleptic characteristics from the meat of livestock. They can also be used for inhibiting the growth of cells which are regulated directly or indirectly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates immunogenic composition for eliciting an immune response to luteinising hormone releasing hormone (LHRH). The composition comprises a LHRH-diphtheria toxoid (DT) conjugate adsorbed to an ionic polysaccharide. The LHRH-DT compositions can be used for eliciting an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New immunogenic leutenising hormone releasing hormone compositions comprise LHRH conjugated to diphtheria toxoid and adsorbed to an ionic polysaccharide, used to inhibit reproductive function in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HRH; immune response; luteinising hormone releasing hormone; DT; diphtheria toxold; castrating; oestrus cycling; aggression; breas sexual activity; organoleptic; livestock; cell growth; malignant; prostate; ovarian; oncofoetal; hyperplastic; pregnancy;

This plasmid contains the LKT 111 polypeptide fused to sixteen copies of the GnRH peptide, in the pattern of: 8 copies of GnRH-LKT 111-copies of GnRH. This chimera lacks cytotoxic activity which enables there to be an increase in antigen presentation and thus an optimal immune response. The removal of this region also enables the truncated LKT to be expressed at much higher levels and allows the amount of antigen administered to be reduced. This chimeric protein comprises a antigen administered to be reduced. This chimeric protein comprises a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 9;

                                                                                                                                                                                                                This sequence represents a fusion protein comprising gonadotropin-
CC releasing hormone (GnRH) immunogens and a Pasteurella
CC haemolytica leukotoxin (LKT) protein. The fusion protein comprises, if
CC the N to C-terminal direction, a synthetic peptide sequence (Y58364), an
CC eight copy GnRH multimer (composed of two copies of the 4xGnRH multimer
CC sequence of Y58363), the LKT protein (which functions as a carrier
CC protein), and a second eight copy GnRH multimer. The fusion protein may
CC be used in a vaccine composition for prepubertal administration to a
CC vertebrate subject to result in prolonged suppression of reproductive
CC behaviour and/or fertility, GnRH immunogens, analogues or antibodies
CC that cross-react with endogenous GnRH of a vertebrate subject are used
CC to manufacture a composition or vaccine for immunosterilisation or
CC communocontraception of feline, canine, equine or cervine subjects.
CC The vaccines are used to suppress reproductive behaviour and/or
CC results in a prolonged, long-term suppression of
CC results in a prolonged, long-term suppression of
CC varian development and/or function in females. The methods provide a
CC viable and desirable alternative to surgical forms of sterilisation that
                                                                                                                                 Matches

The invention is used to produce food animals that exhibit the weight gain and muscle/fat distribution of male animals without the problems associated with male animals. Such problems include "boar taint", a urine-like odour found in cooked meat of uncastrated pigs which is caused by steroids stored in the tissues, and similar flavour impairments in the meat of other intact male animals. The invention is more reliable than prior art immunocastration techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hormone (GnRH)-leukotoxin (LKT) fusion protein, which may be used as a vaccine. The LKT portion of the protein acts to enthe immunogenicity of the multimeric GnRH portion (Y58135).

                                                                                                                                                                                                                                                                                    poblil. This plasmid contains the LKT-GnRH chimeric protein from poblil. This plasmid contains the LKT 111 polypeptide fused to four copies of the GnRH peptide. This chimera lacks cytotoxic activity which enables there to be an increase in antigen presentation and thus an optimal immune response. The removal of this region also enables the truncated LKT to be expressed at much higher levels and allows the amount of antigen administered to be reduced. This chimeric protein comprises a leukotoxin polypeptide, several multimers, and a GnRH sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual
                                                                                                                                                                                                                                                                                                                                                                                                                                                      of.
